

Retail Sales & Profit Intelligence Dashboard

Microsoft Excel Data Analytics Portfolio Project

Project Objective

Build an end-to-end retail analytics solution that converts transaction-level sales data into decision-ready KPIs, PivotTable analysis, interactive dashboard visuals, and What-If profitability scenarios.

Executive KPI Summary

Total Net Sales	Total Profit	Units Sold	Profit Margin
Rs. 2,381,690	Rs. 598,090	422	25.1%

Key Business Insights

Insight	Leader	Net Sales
Top sales category	Electronics	Rs. 1,554,800
Top region by sales	North	Rs. 883,735
Top product by sales	Laptop	Rs. 781,000
Top salesperson by sales	Aman	Rs. 883,735
Top channel by sales	Corporate	Rs. 1,296,340
Best month by sales	Sep-2026	Rs. 533,310

Analytical Interpretation

Electronics is the dominant revenue category and also delivers the highest category-level profit. North is the strongest region, while Corporate is the highest-revenue channel. Laptop is the top product by net sales, and September 2026 is the strongest month in the dataset. The overall business profit margin is approximately 25.1%.

Excel Skills Demonstrated

Data cleaning; Excel Tables; number/date formatting; sorting and filtering; duplicate handling; Data Validation; Conditional Formatting; SUM, AVERAGE, MAX, MIN, ROUND; IF, IFS, AND, OR; SUMIF/SUMIFS; COUNTIF/COUNTIFS; relative/absolute/mixed references; VLOOKUP, XLOOKUP, INDEX-MATCH, OFFSET practice; PivotTables; PivotCharts; slicers; timeline concepts; Goal Seek; Scenario Manager; one-variable and two-variable Data Tables; dashboard creation; protection concepts; VBA and Macro concepts.

Workbook Structure

Sheet	Purpose
Sales_Data	Transaction-level sales dataset and calculated fields
Pivot_Analysis	Category, region, product, salesperson, channel and trend analysis
Dashboards	KPI cards, charts and slicer-driven dashboard
Project_Notes	Formula practice and analysis notes
Scenario Summary	Scenario Manager comparison output
What-If Analysis	Goal Seek and profitability scenario model

Portfolio Positioning

This project demonstrates the complete Excel analytics workflow: raw data preparation, formula-driven calculations, business analysis, PivotTable summarization, interactive visualization, scenario modeling, and management reporting. It is designed for GitHub, LinkedIn, resume inclusion, and Data Analyst interview discussion.

Macro Note

The source workbook supplied for packaging was an .xlsx file, which cannot contain an embedded VBA project. The repository includes a macro-enabled .xlsm copy of the workbook structure, but no VBA code could be recovered from the source file. To package actual recorded/written macros, use the original .xlsm workbook as the source.
